

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings that are utilized on lift masts so as to help them perform within difficult environmental conditions. Lift masts are normally subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is regularly exposed to environmental influences like dust, cold, heat, aggressive ambient air, moisture and contamination. Hence, the lift masts' guidance arrangements should be specifically strong and have a particular high load carrying capability.

Carriage rollers have been developed as the answer for operating in various environmental conditions. These bearings are the solution where the guidance arrangements of the lift masts should be economical and maintain operational security while having the ability to handle a specifically high load carrying capacity.
